

Provita Probiotic

Descriptions:

Provita Probiotic contains saprophytic lactic acid-producing bacteria and compounds to facilitate the development of these microorganisms. After administration of the preparation, the above mentioned bacteria colonise the digestive tract, changing the environment the existence of intestinal flora and thus prevent the spread of pathogenic microorganisms. Bacteria, vitamins and nutrients contained in the probiotic stimulate intestinal peristalsis. They improve the absorption of food and increase the body's immunity. They speed up weight gain, improve vitality and relieve stress. It is intended for small animals: dogs, cats and rabbits.

Recommendations:

method of use:

Capacity:

15 ml dosing tube syringe

Composition:
